

The timeout was a witness, not a cause.

New external observation changes one causal sentence in LN-0248 without erasing the bench record or reversing its lifecycle conclusion.

Correction · COR-0249-01	Target · LN-0248 / OBS-01	Effect · mechanism narrowed	Conclusion · unchanged
--------------------------	---------------------------	-----------------------------	------------------------

Synthesized specimen · revised presentation 2026-09-06

People, times and results illustrate the method. Original CSVs are excerpts; complete aggregate groups were constructed from the narrative on 2026-09-06. Read the source-coverage supplement.

ILLUSTRATIVE CORRECTION

This page demonstrates how a signed notebook changes its mind without replacing its original record.

NORMALIZED CORRECTION

01 / CORRECTION TARGET

Encode invocation is not write completion

ORIGINAL · PRESERVED IN LN-0248 Shutdown destroyed the socket before the encoded acknowledgement could be written. Too broad: it conflated calling the encoder with completing the socket write.	CORRECTED · COR-0249-01 The encoder ran, but shutdown destroyed the socket before the reply write completed and became observable. Narrower claim supported by the external observer.
--	--

NEW CAPTURE

02 / NEW OBSERVATIONS

External observation with trace hooks disabled

OBS-0249.01		14:02 · Priya observing	
HYPOTHESIS BEFORE RUN Hooks may perturb order—or merely label encode-call as reply-written.		SETUP Internal trace off; external socket observer; five immediate stops.	
RAW OBSERVATION encode called before close: 5 / 5 write callback before close: 0 / 5 ack observed: 0 / 5		INTERPRETATION AT THE TIME Prior trace semantics were too coarse; failure does not require hooks.	

OBS-0249.02		15:11 · externally witnessed	
HYPOTHESIS BEFORE RUN If completion is the boundary, callback sequencing passes without hooks.		RAW MEASUREMENT callback sequence: 20 / 20 ack immediate control: 0 / 5 ack	
INTERPRETATION Lifecycle conclusion survives; causal wording narrows.		STATE MEASURED + INDEPENDENT	

VISUAL INTERPRETATION

03 / EPISTEMIC DIFF

The conclusion stands; the boundary moves.

FIGURE F-0249-01	KIND corrective model	CREATED after OBS-0249.01 / .02	CORRECTS F-0248-02 label
----------------------------	---------------------------------	---	------------------------------------

Corrective model · write completion is the boundary

Encoder called
Both paths invoke encoding.

→

Bytes queued
Failed path closes before write completion.

→

Write callback completes
Passing sequence waits for this boundary.

→

Owner observes reply
Successful acknowledgement.

Internal encode events cannot establish owner-visible completion. See OBS-0249.01–02.

COR-0249-01: mechanism narrowed

CORRECTION	COR-0249-01	TARGET	LN-0248 synthesis · OBS-0248.01 interpretation
ORIGINAL	Preserved: yes	REASON	encode-called ≠ write-completed
EVIDENCE	OBS-0249.01/02 · A-0249-01	CONCLUSION EFFECT	None; mechanism narrowed
AUTHOR	Priya Nwosu	WITNESS	Mira Chen

Evidence and remaining lifecycle question

ID	PARENT	KIND	ARTIFACT	CAPTURED BY	INTEGRITY	HANDLING
A-0249-01	OBS-0249.01/02	External excerpt	external-observer.csv	Priya Nwosu · external observer	Specimen · unhashed	Public-safe
A-0248-01	Prior record	Internal trace	stop-trace.txt	AI coordinator · trace hook	Prior artifact · unchanged	INTERNAL
ART-0249-AGG	OBS-0249.01-02	Aggregate fixture	All narrative groups	Codex · constructed 2026-09-06	Synthesized / unhashed	Public specimen

Q-0248-02 · CLOSED

Did hooks create the failure?

No. Failure reproduced externally. The hooks' event labels were too coarse for the causal sentence.

Q-0248-01 · OPEN

Explicit lifecycle primitive?

Still open. The correction strengthens the need but does not implement the API.

Corrected without pretending the first page never existed.
